

# New Task Definition Workshop

## IEA SHC Task on New Generation Solar Cooling systems

### STATUS OF NEW TASK PROPOSAL :

### ORGANISATION & RESULTS

Daniel MUGNIER – Paris, 22/03/2013

## The main ambitions of this meeting are :

- **To stimulate the R&D on New Generation Solar Cooling Systems**
  - By presenting ongoing and past works
  - By making entities meeting and exchange
  
- **To be able to show to the next Exco Meeting in Roma in June 2013 :**
  - A significant interest among SHC countries (at least 3 !)
  - To track interested participants and their possible inputs
  - To show ongoing consortium/budgets/projects are on the way
  - To initiate a detailed Task description, Work plan and Information Plan

## Possible Time schedule after the meeting :

- 20th of April First Draft Annex Text + Work Plan from TECSOL to all Participants and designated Subtask Leaders
- 20th of May Feedback from participants and visibility on possible projects
- Midd of June Presentation to the IEA SHC ExCo
- End of June Confirmation+date for second definition meeting
- Midd of Oct. New and last definition meeting to confirm Workplan
- November Final Annex/Workplan submission to Exco

# ***Discussion of the Task Work Plan***

**Task Work Plan** : proposal from the Task initiators

Structure :

- what should be in the Task
- what should not be in the Task
- priority of different work items

Time Schedule including milestones

Deliverable and results

Dissemination activities

Subtask Leadership

Distribution of work: who is contributing what

# *Discussion of the Task Work Plan*

## **Discussion of open questions and planning of next steps**

Task name and definition

Production of first draft Work Plan and Technical Annex (main documents for the Executive Committee)

Desired Task start date and/or new planning

New Task Definition meeting

# Proposed Task Structure

**Subtask A**  
**Components, Systems &  
Quality**

**Subtask B**  
**Control, Simulation &  
Design**

**Subtask C**  
**Testing and demonstration projects**

**Subtask D**  
**Dissemination & market deployment**

## Subtask A: Components, Systems & Quality

### General objectives :

- \* to better know and characterize the most important components of the new solar cooling & heating systems, considering existing solar thermal cooling systems as a reference
- \* to identify ongoing and future related standards and testing methods
- \* to identify where new solar cooling & heating systems are suitable
- \* to develop tools and deliverables permitting to show the level of quality of both the most critical components and systems.

### Specific objectives :

- \* to know the commercially available equipment on the AC side compatible with PV electricity supply as well as solar thermal cooling equipment
- \* to know the R&D entities working at the moment on the topic and what are the ongoing outputs, especially the key points in the interface AC unit / PV modules and system /grid
- \* to define the different possibilities on the storage side for new solar cooling & heating
- \* to easily classify the ST/PV cooling products/application (schematic square view method) so as to prepare a certification process
- \* to define procedures for measuring the performance of the PV cooling & heating systems and prepare the conditions for a quality label
- \* to estimate the value of electricity and LCA of the main components and systems

## Subtask A: Components, Systems & Quality (ISE)

### Activities : Focusing on hardware side

A1 : Reference system (for heating/cooling)

A2: Adapted chillers and heat pumps **including heat rejection**

A3: new generation solar production for cooling (PV and others) and heating (DHW+ambient)

A4: **Storage (electrical and thermal) with storage management**

A5: Systems integration into buildings, microgrid and central Grid

### Deliverables

\* D-A1: Definition of the existing cooling reference systems.

\* D-A2: State of the art of new generation commercially available products including costs, efficiency criteria ranking and performance characterization. **(beginning of the Task)**

\* D-A3: Technical report on recent R&D work on the topic **(end of the Task)**

\* D-A4 : Report on best practices on how to manage the interface AC unit / PV modules and system /grid

- D-A5: Technical report on best practices for energy storage including both efficiency and adaptability in solar cooling systems

- **KPI of systems**

- \* D-A6: Techno-economical analysis report on comparison between thermal and PV existing solar cooling systems including as well LCA approach and Ecolabel sensibility

\* D-A7: Report on a new and universal classification method "new generation solar cooling square view" for generic systems

\* D-A8 : Draft document defining the performance indicators and possible characterization test method (permitting to lead to a quality labeling scheme for new generation solar cooling systems) as well as standards

## Subtask B: Control, Simulation & Design

**General objective** : to investigate the different control possibilities for the new generation cooling & heating systems for buildings so as to select the best strategies for given climates and countries and then develop modelling tools to predict performances and size/design systems. Besides, to manage a smart interaction with electric grid

### Specific objectives :

- \* to analyze and select optimized control strategies to manage the interaction between solar and cooling machine (PV and heat pump unit especially)
- \* to provide modelling tools for complete generic systems
- \* to report sensitivity analysis on most of the selected systems
- \* to compare the performances at system level of all innovative systems
- \* to size the systems
- \* to investigate demand/response strategies to optimise the interaction with smart grids
- to create models including energy price variation sensibility

## Subtask B: Control , Simulation and Design (Italy to be asked)

### Activities : Focusing on software side

B1 : Reference conditions (economical, climatic, reference building, etc..)

B2 : Grid access conditions and building load management analysis (ATISYS interest)

B3 : Building/grid Load and weather forecasts

B4: Model of subcomponents and validation (ATISYS interest)

B5: System simulation and validation + Control strategy analysis and optimisation for ST and PV

B6: System inter-comparison (cost/performance/reliability)

(between systems and with conventional, solar thermal, gas, etc.)

### Deliverables

- \* D-B1 : Overview on peak demand & demand side management possibilities
- \* D-B2 : Technical report on optimised control strategies for solar cooling & heating systems
- \* D-B3 : Technical report on system simulation and validation
- \* D-B4 : Technical report on system dimensioning
- \* D-B5 : Design tool including a country- and climate-sensitive economical analysis

## Subtask C: Testing and demonstration projects

**General objective** : to stimulate, monitor and analyse performances of field test systems and demonstration projects for new generation solar cooling & heating systems

### **Specific objectives** :

- \* to create a monitoring procedure for field tests or demo projects
- \* to select identified projects and organise a complete field test monitoring campaign for it
- \* to analyse potential technical issues on the monitored systems
- \* to report on the measured performances of the systems
- \* to validate and initiate standardised testing methods

## Subtask C: Testing and demonstration projects (ECOVIZ)

### Activities:

- C1: Monitoring procedure and monitoring system selection criteria
- C2 Definition of energy performance indicators
- C3: System description for field test and demo project (at least 3 projects)
- C4: Monitoring data analysis on technical issues & on performances
- C5: Best practices / feedback (planning+ commissioning + operation/measurements, user and grid utility...)
- C6 : Testing method initiation for standards

### Deliverables :

- \* D-C1 : Monitoring procedure for field test & demo systems (depending on size and application)
- \* D-C2 : Catalogue of test/demo systems (with full description)
- \* D-C3 : Technical report on monitoring data analysis (technical issues + performances)
- \* D-C4 : Technical content for best practice brochure on efficient new generation cooling and heating systems
- \* D-C6 : Technical report presenting a draft testing method for a quality standard on new generation cooling & heating systems

## Subtask D: Dissemination and market deployment

### General objectives :

- \* implementation of targeted promotion activities based on the collective work results;
- \* production of dissemination material for external communication; the implementation of knowledge transfer measures towards the technical stakeholders;
- \* development of instruments and their provision for policy makers and the creation and promotion of certification and standardisation schemes.

### Specific objectives :

- \* to **disseminate the Task results** on national and international level
- \* to provide **efficient communication tools such as brochures and guidelines**
- \* to collect and structure **evidence for policy actions**
- \* to create guidelines for **road mapping new generation solar cooling & heating**

## Subtask D: Dissemination and market deployment (Green Chiller)

### Activities :

D1 Website dedicated to the Task

D2 Guidelines and brochures

D3 Newsletters, workshops and conferences

D4 Roadmapping and lobbying actions

## Subtask D: Dissemination and market deployment

### Deliverables :

- \* D-D1: Website dedicated to the Task
- \* D-D2 : Best practices high quality brochure
- \* D-D3 : Simplified short brochure
- \* D-D4 : Guidelines for Roadmaps on new generation solar cooling & heating
- \* D-D5 : Outreach report
  - Customer and policy maker workshops
  - Organising national industry workshops, industry workshops in national languages in participating countries addressing target groups (related to Experts meetings)
  - Publishing a semi-annual e-newsletter for the industry
  - Report on lobbying actions describing all the actions and their impacts

## Dissemination / Information plan

- \* **Website** dedicated to the Task (D)
- \* **Training material** for installers and planners and training seminars feedback report (D)
- \* Semi-annual e-newsletter for the industry (D)
- \* **Industry workshops** in national languages in participating countries addressing target groups (related to Experts meetings) (D)
- \* **Best practices high quality brochure** (D) : 30 pages
- \* **Simplified short brochure** (D) jointly edited by the Subtask Leader and IEA SHC program
- \* **Guidelines for Roadmaps on New Generation Solar Cooling & Heating** (D) and possibly general international Roadmap on PV cooling & heating (optional)

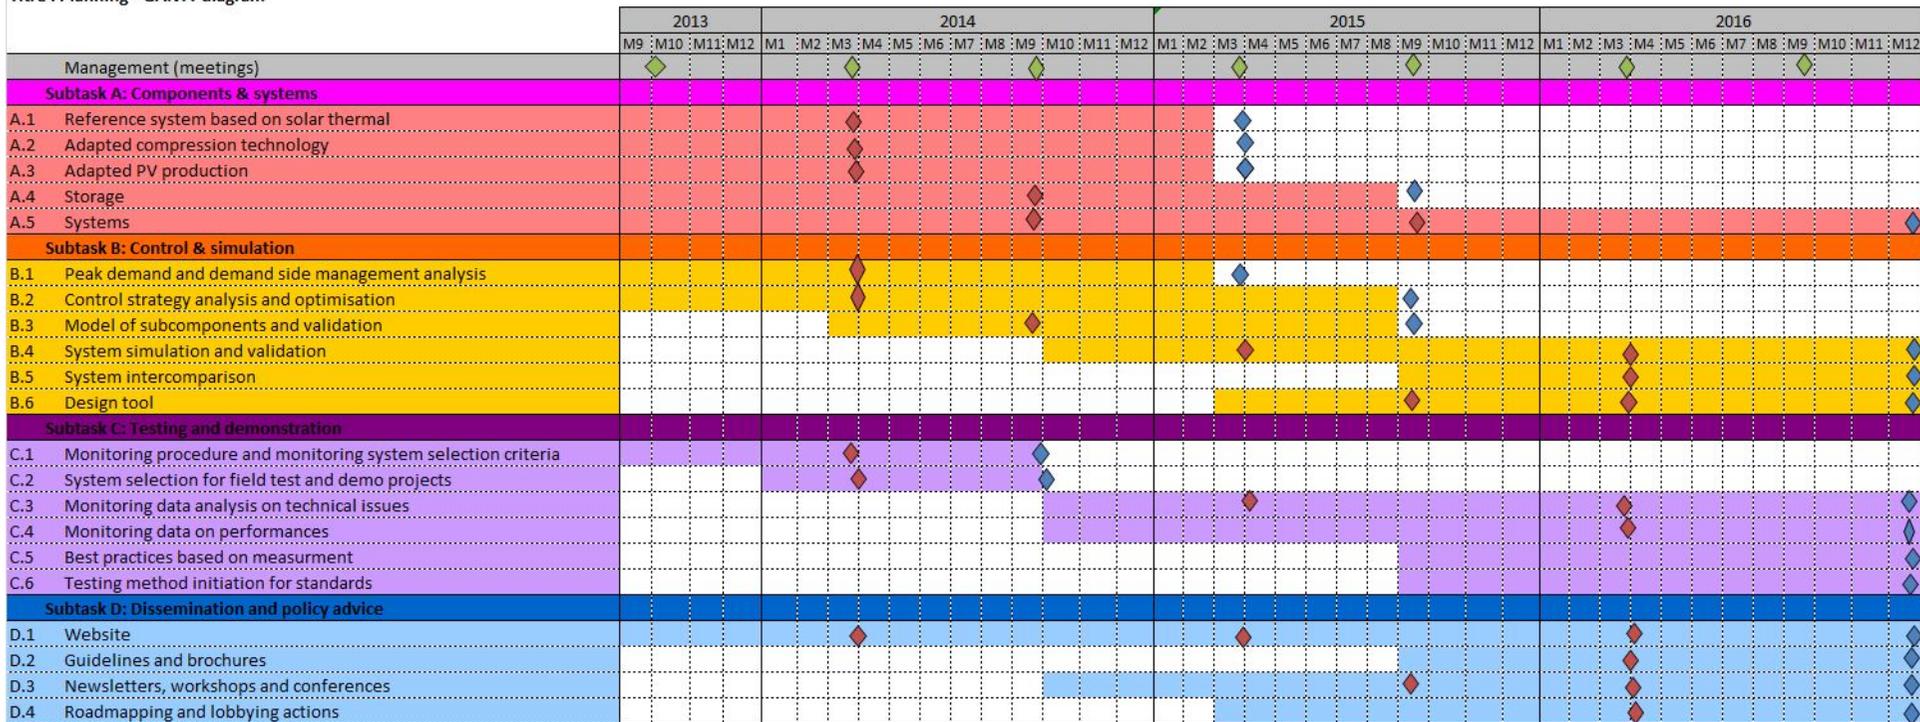

# Proposed Time schedule

Paris 21-22/03/2013

## IEA Task on New generation solar cooling systems

Duration : 40 months

Titre : Planning - GANTT diagram

**Légende :**

- ◆ Deliverable
- ◆ Semi annual Expert meetings
- ◆ Milestones

## Remarks for Discussion from FhG ISE

- Open cycles (DEC / IEC) combined with compression cooling:
  - Concepts with sorptive dehumidification of interest ?
  - Concepts with indirect evaporative cooling of interest ?
- Concept of gas-driven heat pump with solar thermal support of low-temperature source / DHW of interest ?
  
- Remark on scope of task: 'food conservation not included'.

### Why not?

Chance to develop feasible solar thermal concepts (results from pilot plant available {Fresnel coll. / NH<sub>3</sub>-H<sub>2</sub>O chiller / cold store} in cooperation with commercial cold store distributor)

- Remark on limit: 'direct coupling', especially for PV-chiller

### Why?

Appropriate storage concepts – either thermal (sensible, latent) or electrical – and control concepts may force the use of local PV-cooling

# Remarks for discussion from Fhg Umsicht

- Desire/request for the New Task: Enlarge scope to other applications than building cooling, e.g. cooling of electronic shelters, food stocks!?!

# Remarks for discussion from ILK Dresden

- Desire/request for the New Task: Enlarge scope to other applications like refrigeration

## ***Discussion of the Task Work Plan***

Structure :

- **what should be in the Task**

# *Discussion of the Task Work Plan*

Structure :

- what should NOT be in the Task

## ***Discussion of the Task Work Plan***

Distribution of work: who is contributing what

# *Discussion of the Task Work Plan*

## **Discussion of open questions and planning of next steps**

Task name and definition

Production of first draft Work Plan and Technical Annex (main documents for the Executive Committee)

Desired Task start date and/or new planning

New Task Definition meeting

# Task name : Quality assurance and support measures for Solar Cooling

Duration : 3,5 years (October 2011 – March 2015)

**Subtask A:** Quality procedure on component level

**Subtask B:** Quality procedure on system level

**Subtask C:** Market support measures

**Subtask D:** Dissemination and policy advice

**PARTICIPATING COUNTRIES :** Australia, Austria, Canada, Belgium, France, Germany, Italy, Singapore, South Africa, Spain and USA *(no claim for completeness)*

**PARTICIPATING MANUFACTURERS AND COMPANIES :** Aiguasol, Climatewell, Industrial Solar GmbH, Invensor, Sortech, SOLEM, SOLID, TECSOL, Thermosol *(no claim for completeness)*

<http://www.iea-shc.org/task48/>

## Structure of the Task

**Subtask A**  
**Quality procedure on component level**

**Subtask B**  
**Quality procedure on system level**

**Subtask C**  
**Market support measures**

**Subtask D**  
**Dissemination and policy advices**

# Planning

D.2 Best Practice brochure							
D.3 Simplified short brochure							
D.4 Guidelines for Roadmaps on Solar cooling							
D.5 Updated specific training seminars adapted to Quality procedure							
D.6 Outreach report							

**Légende :**

◆ Deliverable

## Objectives (1/2)

To create a logical follow up of the IEA SHC work already carried out by trying to find solutions to make the solar thermally driven heating and cooling systems at the same time efficient, reliable and cost competitive.

- 1) \* **Development of tools and procedure to make the characterization of the main components of SAC systems**
- 2) \* **Creation of a practical and unified procedure, adapted to specific best technical configurations.**
- 3) \* **Development of three quality requirements targets :**
  - - prescriptive “deemed performance” approach (<20kW): Manufacturers who offer a standard packaged solution declare the performance level of the package under certain rating constraints. This rated performance can then be used in a variety of policy interventions (eg : award of certificates, restriction on sale of low performance products, thresholds for subsidies etc).

## Objectives (2/2)

- - prescriptive “deemed to satisfy engineered” approach (>20 kW) : Where customised solutions are more appropriate, prescribed engineering design and implementation requirements can be specified to ensure the quality of the systems from components to operation (system, installation, etc.). The ability to “qualify” and label installations can be used in a variety of policy interventions (eg : minimum requirement for subsidies, overcoming information barriers, award of points in building rating schemes etc)
- - performance-based approach (>20 kW): While the prescriptive methods described above will be useful within their field of relevance, installers/providers of Solar Thermally Driven Heating and Cooling solutions must also have the ability to innovate and offer tailored solutions outside the direct scope of the prescribed approaches. This can be achieved by allowing direct metering and verification of performance. The ability to benchmark actual performance against alternative solutions can be used in a variety of policy interventions (eg : promotion of energy performance contracting, award of certificates etc)

### 4) \* **Production of tools to promote Solar Thermally Driven Cooling and Heating systems**

# Structure

## **Subtask A: Quality procedure on component level**

- A1: Chiller characterization
- A2: Life cycle analysis at component level
- A3: Heat rejection
- A4: Pumps efficiency and adaptability
- A5: Conventional solar collection
- A6: State of the art on new collector & characterization

## **Subtask B: Quality procedure on system level**

- B1: System/Subsystem characterization & field performance assessment
- B2: Good practice for DEC design and installation
- B3: Life cycle analysis at system level
- B4: Simplified design tool used as a reference calculation tool : design facilitator
- B5: Quality procedure document/check lists
- B6: Self detection on monitoring procedure
- B7: Quantitative quality and cost competitiveness criteria for systems
- B8: Application for validation of preselected best practice examples

## Structure

### **Subtask C: Market support measures**

- C1: Review of relevant international standards rating and incentive schemes
- C2: Methodology for performance assessment, rating and benchmarking
- C3: Selection and standardisation of best practice solutions
- C4: Measurement and verification procedures
- C5: Labelling possibilities investigation
- C6: Collaboration with T45 for contracting models
- C7: Certification process definition for small systems

### **Subtask D: Dissemination and policy advice**

- D1: Web site
- D2: Best Practices brochure
- D3: Simplified short brochure
- D4: Guidelines for Roadmaps on Solar cooling
- D5: Updated specific training seminars adapted to the Quality procedure
- D6: Outreach report

## Information plan

The following documentation or information measures are planned during the course of the Task (corresponding Subtask in brackets):

- \* Report on best practices on solar collection components for quality, reliability and cost effectiveness (A)
- \* Quality procedure document/check lists guidelines for solar cooling (B),
- \* Self detection on monitoring procedure report (B)
- \* Soft tool package for the fast pre-design assessment of successful projects (B),
- \* Report and database of existing international standards, rating and incentive systems relevant to Solar Cooling (C)
- \* Report on the rating, measurement and verification of solar cooling performance and quality (C)
- \* Report on the selected standard engineering systems (C),

## Information plan

- 
- \* Report on alternative uses of the developed standards and rating framework (C).
- \* Technical report about the results of the Life Cycle Assessment of Solar Cooling systems and LCA tool (A+B),
- \* Website dedicated to the Task (D)
- \* Training material for installers and planners and training seminars feedback report (D) ,
- \* Semi-annual e-newsletter for the industry (D),
- \* Industry workshops in national languages in participating countries addressing target groups (related to Experts meetings) (D),
- \* Best practices high quality brochure (D) : 30 pages
- \* Simplified short brochure (D) jointly edited by the Subtask Leader (Greenchiller) and IEA SHC program
- \* Guidelines for Roadmaps on Solar Cooling (D) and possibly general international Roadmap on Solar cooling (optional)

## Possible Task Names :

- 1) New Generation solar cooling systems
- 2) ...
- 3) ....

## Meeting participation :
